

The River Crab

It is typically found on the muddy and gravelly bottom of cold lakes and watercourses, usually along the banks with aquatic vegetation. The river crayfish only lives in clean, unpolluted waters, making it a good indicator of the "health" of our rivers and lakes.

Riječni rak

Obično se nalazi na muljevitom i šljunčanom dnu hladnih jezera i potoka, obično duž obala s vodenom vegetacijom. Riječni rak živi samo u čistoj, nezaagađenoj vodi, što ga čini dobrim pokazateljem "zdravlja" naših rijeka i jezera.
