

ŠARAN / COMMON CARP (*Cyprinus carpio*)

Preferira vode stajaće i rijeke sporijeg toka koje se ljeti dobro zagriju. Radi se u pripitomljenoj vrsti i već se stotinjak godina uzgaja u ribnjacima. Prema IUCN-ovu popisu smatra se osjetljivom vrstom.

The carp prefers still waters and slow-flowing rivers that warm up well in the summer. It is a domesticated species and has been cultivated in fish farms for about a hundred years. According to the IUCN list, it is considered a vulnerable species.
